

Canine Schistosomiasis Case Reporting Form

Dog liver fluke - *Heterobilharzia americana*

Background. As of February 2023, 11 cases of *Heterobilharzia americana* infection in dogs were reported in the counties of Los Angeles, Orange and Riverside. This parasite is spread in freshwater locations and involves a snail intermediate host. It has not been detected before in Southern California. Therefore there is a multicounty effort to investigate cases and determine the source. Veterinarians are requested to complete this form in partnership with the owners of dogs who have had the infection.

Reporting Veterinarian and Veterinary Practice

VETERINARIAN NAME	NAME OF PRACTICE
